

# Rollover Navigation Buttons

As well as using a built in navigation bar you can also create your own set of buttons using WebPlus. This can sometimes be an advantage in an exam.

- A navigation bar linking to: the home page, the benefits of recycling page and the recycling page.
- The navigation bar should include the home page, benefits and recycle icons (from the IMAGES folder) for the buttons. Each icon should be 60 x 60 pixels. Each icon will need to be edited to create a rollover button.

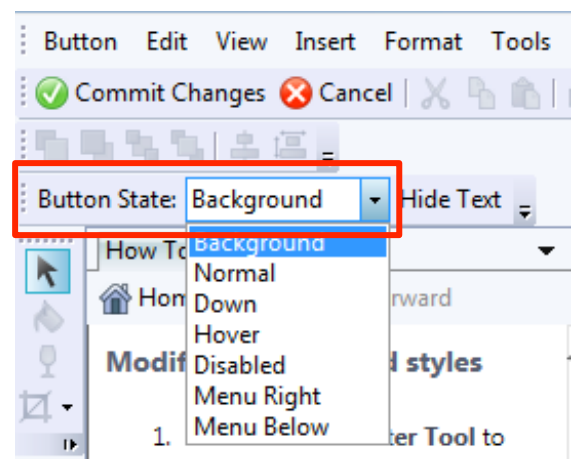

## Step 1 – Make the Button

1. **Insert > Navigation > Button**
2. Change the **Button Label** text to the words you want on the button
3. Click the **Hyperlink** tab to add a hyperlink (probably a **Site Link**)

## Step 2 – Edit the Button

1. Click the Pencil icon to edit the button  
The editing window appears...
2. Find the **Button State** drop down at the **top left**
3. Choose **Background** from the list (the word Button will disappear - that's OK)
4. Click on the button somewhere to select it
5. Use the **Swatches tab** (top right) to change the background colour for the button
6. To add a picture to the button click **Insert > Picture from File**
7. Drop the picture on the button and resize as required

8. Choose **Normal** from the **Button State** drop down
9. Click on the **word** Button somewhere
10. Use **Swatches** to change the colour of the writing
11. You can use the **top menu** to change the font, align the text etc...
12. Click around the **edge** of the button somewhere to bring back the Button State drop down
13. Choose **Hover** from the **Button State** drop down  
This will change the way the button looks when you mouseover it (it will create a rollover button)
14. Click on the **background** of the button (away from the text)
15. Change the background colour using **Swatches**
16. Add any pictures as before (**Insert > Picture from File**)
17. Click on the **word** Button and edit the text colour, font, alignment etc...

Remember: make text stand out and avoid red and green together

#### **Advanced:**

You may want to consider changing the **Down** Button State as well - this is what the button shows when you are clicking the mouse on it

### **Step 3 – Place the Button**

1. Click the green **Commit Changes** button at the top left of the window
2. Click **OK** to confirm the button
3. **Click** to drop the button on the page and drag it into position
4. Check the button works: **File > Preview Site > Preview in Internet Explorer**

### **Making Changes:**

#### **To edit the text on the button:**

1. Click the button to select it > click **Edit Button** on the top menu bar
2. Change the words in the Button Label box

Hyperlinks can be changed using a right click as usual

#### **To edit the button design:**

1. Click the button to select it > click **Edit Button Design** on the top menu bar
2. Edit and Commit Changes
