

Using AI

“Can I get Chat GPT to write the text for my IDMP?”

Using AI

ChatGPT is an example of an **AI bot** (robot)

AI is **Artificial Intelligence**

You can ask them to create writing for you (say, about the history of Stowmarket)

They work by reading through hundreds of resources on the web and getting the “**average**” of what they say about something - the most common things

Using AI

Reasons to use AI:

- it's less work for you
- it's quicker

Using AI

Reasons **not** to use AI:

- it abuses other people's copyright but taking our words and averaging them out
- it can be wrong - frequently
- it's lazy and you'll learn less about how to write
- it's not creative
- the power and water required for the huge computer systems needed to power AI are a major environmental problem

Using AI

“Can I get Chat GPT to write the text for my IDMP?”

Please don't

It's unfair and you'll learn less

And it will all be the same, which is boring

And there are enough issues with climate change anyway
