- Learn how to edit images for a purpose

Start by:

Non-destructive editing uses (called in Corel PhotoPaint) to change what an image looks like without changing the that make up the image. This means that the original image can still be used

Saving files with new names each time also helps make sure the original image is never changed. This is called

Editing images

- Learn how to edit images for a purpose

Start by:

1. Open your gallery from last time
2. Check that your work has been added to it – if necessary, open your work in PhotoPaint and export it before adding it
3. Check you've added words to your gallery to describe what you did
4. Look at **someone else's work**: tell that what you **like** about it and give them **up to three things** to improve. Make at least **one improvement** to your own work based on **feedback**
