

Making the designcats logo

1. Create a new **Artboard**
2. Type the words designcats. Use a boldish font at about size 60pt
3. Click the **Artboard tool** on the **left toolbar** and resize the artboard as required (you can drag the edges – leave some space underneath)
4. Colour the font in an interesting way to get a contrast between the colours
5. Use the **Pen tool** to add a line for tail. Make sure you have the **fill colour** set to **transparent**.
6. Use Width Profile 2 and about width 10pt
7. **Smooth** the line out using the **Direct Selection Tool** to pick up each **anchor point** and click the **Convert: smooth** button on the **top toolbar**

Now add some ears to the top of the c

8. Use the **Pen tool**. This time you want a **fill colour** but **no stroke**.
9. **Click three times** to build a triangle. You could try using the **Direct Selection Tool** (the second arrow) to smooth the lines and move things around.
10. You may find the **Zoom tool** on the **left toolbar** handy (double click it to zoom all the way back out)
11. Repeat for the second ear

NOTE: You may need to click on the **Selection Tool** after you've made the first ear to stop the Pen tool thinking you're continuing to use the same shape
