Adding hyperlinks in Dreamweaver

Hyperlinks are the key bits of webpages which link pages together.

1. Make sure you've **copied your homepage three times** before you start adding links

2. **Highlight** the word **Home** on the navigation line

3. A blue pop up section should appear

4. Click the **chain link button** on this
    The blue area will expand and
    the words "**Enter link**" will appear

5. At the **end** of the expanded bit,
    click the **folder icon** to browse
    for a file

6. **Find** the page to link to - for the homepage you
    need to link to **index**
    Add the link

7. As you add links, they should change colour
    and the name of the link should show in the
    "Enter link" box

8. **Repeat** this for all four pages

The next job is to add content for the three pages about animals. Start by writing two or three paragraphs about the animal
